Respiratory Care Scope of Practice

Respiratory Therapists are health care professionals whose responsibilities include patient assessment, disease management, diagnostic evaluation, management, education, rehabilitation and responsible for the care of patients with deficiencies and abnormalities of the cardiopulmonary system. The scope of practice crosses all patient, client and resident populations and includes the application of technology and the use of protocols across all care sites including, but not limited to various in-patient and out-patient settings (e.g. acute care, urgent care, long-term care, sub-acute care, skilled nursing facilities), the hospital, clinic, physician’s offices, sleep labs and clinics, vendor and industry venues, rehabilitation facility, skilled nursing facility, and the patient’s home.

These responsibilities are supported by education, research and administration. Diagnostic activities include but are not limited to:

1. Obtaining and analyzing physiological specimens
2. Interpreting physiological data
3. Performing tests and studies of the cardiopulmonary system
4. Performing neurophysiological studies
5. Performing sleep disorder studies

Therapy includes but is not limited to:

1. The application and monitoring of medical gases and environmental control systems
2. Mechanical ventilator management
3. Insertion and care of artificial airways
4. Bronchopulmonary hygiene
5. Administration of pharmaceutical agents
6. Cardiopulmonary rehabilitation
7. Hemodynamic cardiovascular support
8. Sleep support

The focus of patient and family education activities is to promote knowledge and understanding of the disease process, medical therapy and self-help. Public education activities focus on the promotion of cardiopulmonary wellness.

The practice of a respiratory therapist is directed by a licensed independent practitioner and is determined by state licensure laws where applicable. The practice typically focuses on:

- Patients across the age spectrum – neonatal through geriatric.
- Direct and indirect patient observation and monitoring of signs, symptoms, reactions, general behavior and general physical response to respiratory care and diagnostic interventions.
- Implementation of respiratory therapy procedures, medical technology, and diagnostic procedures necessary for disease prevention, treatment management, and pulmonary rehabilitation.
Utilization of protocols, guidelines, pathways, and policies driven by evidence-based medicine, expert opinion, and standards of practice.

Participation in research to evaluate interventions and technology to determine their ability to improve patient outcomes.

Facilitation and direction of patient rehabilitation programs and the development of disease and care management plans.

Provision of patient and family education activities to promote knowledge and understanding of the disease process, medical therapy and resources available to assist in the care of the patient.

Facilitation of health care student learning.

Support of public education activities focused on the promotion of cardiopulmonary wellness and prevention that is sustainable.

The responsibilities of a respiratory therapist include, but are not limited to:

1. **Performance and collection of diagnostic information**
   a. Pulmonary function testing
   b. Interventional diagnostics
   c. Sleep studies
   d. Noninvasive and invasive diagnostic procedures
   e. Blood gas and other pertinent laboratory analysis

2. **Patient assessment**
   a. Physical examination
   b. Diagnostic data interpretation

3. **Application of therapeutics to respiratory care**
   a. Medical gas therapy
   b. Humidity therapy
   c. Aerosol therapy
   d. Artificial airway insertion, management, and care
   e. Airway clearance
   f. Invasive and non-invasive mechanical ventilation
   g. Extracorporeal Life Support (ECLS)

4. **Assessment of therapies**

5. **Disease management of acute and chronic diseases**

6. **Collaborative support of hemodynamics**

7. **Discharge planning and case management**

8. **Provision of emergency, acute, critical and post-acute care, including**
   a. Patient and environmental assessment
   b. Therapeutic interventions
   c. Patient land and air transport
